

UI Design and Prototyping Report Template

Jack Free Books

1. Introduction

The site that refers to the recognized books or books of new authors who want to advertise themselves. The site on which the user can find a book from the category he wants and can search for book he wants.

This site can have mobile application that reference the same database.

Mobile application can inform user about new books that are available.

Each book have rating system with reviews, links to publisher, image, description, author information.

Users can rate books and post comments on books.

2. User Interface Design and Prototype

Basic concept of UI implemented in these mocks:

<https://exeg.github.io/idea2/index.html>

<https://exeg.github.io/idea2/book.html>

I want to make interface where user can simply find the book he want with the help of search system or categories menu.

3. Navigation Structure

Navigation structure consists of primary menu and secondary menu.

Primary menu consists of general information, contact information and general content of the catalog.

Secondary menu will consist mainly of book genres.

Please see my work flow diagram:
